

In connection with the latest events of the global pandemic, many people are afraid of a lack of masks and the necessary medicines. Following this, we decided to make a directory of medicines in each pharmacy in the cities of Kazakhstan.

The main function of our project is the availability of information and the simplicity in finding the right medicines and medical supplies for our users.

The end user is our regular users. And database administrators update and correct our data.

The main source for the idea was the site "<https://i-teka.kz/>"
